"adi as a Discourse Marker in Spoken Iraqi Arabic

Abdulkhaliq Alazzawie
Department of Foreign Languages, University of Nizwa, Nizwa, Sultanate of Oman

Abstract—The linguistic element "adi is extensively employed in the variety of Arabic spoken in Iraq to aid in communication and facilitate the cohesion and flow of conversation. "adi which roughly means no worries, okay, how dare you?, yeah I hear you, or I've gone through the same thing myself, displays properties typically displayed by discourse markers. For example, it occurs phrase-initially or phrase-finally, it is a grammatically optional lexical item, it is multi-functional and it is an essential feature of spontaneous oral discourse. The aim of this paper is to investigate the use of "adi, its distribution and its varied context-dependent meanings and functions. The description and investigation are based largely on speech samples which the author recorded. These recordings were then transcribed and analyzed in order to identify the functions associated with "adi from a discourse analytical perspective.

Index Terms—discourse marker, context, multi-functionality, utterance, contextual clues

I. METHODOLOGY

The investigation of discourse marker (DM) "adi in the present paper draws from a corpus of approximately 9 hours of informal conversations and interviews with native speakers of this variety of Arabic. Pairs of speakers conversed with each other. The author recorded their conversations and also conducted interviews with 6 other native speakers. All of these recordings were then transcribed and analyzed. The corpus was compiled and then searched for examples of "adi displaying tokens, its distribution and function. Each occurrence was analyzed and identified. The linguistic and pragmatic features were examined and situated within a wider discourse context.

The focus of the paper is comparing the Arabic segment/speech unit "adi to English DMs to see if it falls within the parameters of DMs and to see if it possesses the necessary characteristics to be considered a DM. This makes it necessary to discuss equivalents or something quite similar of DMs occurring in English speech patterns such as so, well, yeah, right and oh.

"adi can also combine with other items producing the phrases ee "adi , ee la "adi or in writing (however, to sum up, etc). Other examples given by Schiffrin (1986) include oh, now, then, so, and, but and or.

DMs are optional. The grammar of an utterance is not affected if they are absent; the sentence structure will still be intact. In other words, DMs are syntactically independent; however, their removal may affect the ease of comprehension (Aijmer 2002, Eslami and Eslami-Rakkeh 2007). A good example of this would be the DM however which may be used to contribute to the meaning of a conversation by suggesting the direction in which the speaker is taking the conversation:

"The government is planning on spending billions on their upcoming space program, which may benefit mankind in some way some day. However, their priority should be here at home given our current economic situation."

Here however introduces an opposing point of view and it is often used in speeches, or debates (arguments for or against something), or arguments to introduce contrast – an opposing point of view to be considered - not overlooked.

A DM may have more than one function, depending on the context within which it occurs. One DM may have a variety of context-dependent functions. Fung and Carter (2007) refer to them or to this phenomenon as multifunctional DMs and they give the example of so, which can act to both launch (begin) and sum up or conclude a topic. Examples of both functions (to launch or sum up a topic) follow in (1) and (2) respectively:

(1) Examples of So Launching a Topic:
   a. So, Judy, are you coming to my party next Friday?
   b. So, what’s up?

© 2015 ACADEMY PUBLICATION
c. So, where do we go from here?
d. So, what now?
e. So, what are you going to do?

However, if it is used to summarize a topic, so, in this context, might be represented in the following examples:

(2) Examples of So Concluding/Summing up a Topic

a. So, now we have come to the end of this story and what a story!
b. So, while we end tonight on a sour note, the weather will be sunny tomorrow!
c. So, to conclude this argument ..., or 
d. So, to sum up, Darwin believed and promoted the idea of evolution, but was the price he paid worth it? 
e. So, I would argue that if water becomes so scarce in the future, we will all have to drink milk or juice. 
f. So, here we are back at square one.1

DMs may belong to different grammatical classes, proposed by Aijmer (2002), Carter and McCarthy (2006) and Fung and Carter (2007). In other words, DMs come from different word classes of adverbials and adjuncts such as unfortunately, like, because, then, or, okay, as a matter of fact and basically. They gave the examples of prepositional phrases by the way, response tokens right, and interjections oh.

The following is an example of a speech with by the way between mother (M) and son (S):

(3) M: By the way, Uncle John is home from the hospital.
S: Oh, thanks mom. I’ll give him a call.

Here is an example of a speech with a response right. A young student (A) phones his friend and classmate (B) and says:

(4) A: Hey, how come you’re not in any of my classes this semester?
The called party replies:
B: I didn’t sign up for the course until January because my parents want to take me to Europe to meet their parents.

Then the caller replies back:
A: Right (or Oh, right…). I forgot. You were born here and have never gone over

Below is an example of an interjection with oh in a conversation between mother and daughter:

(5) M: OK, I’m going to the mall now. See you later. Bye.
D: Oh wait! I want to come too?

“So yes, well and then” can also be sequenced; below is an example of this sequencing. A daughter phones her mother:

(6) D: Hi mom. It’s me.
M: Hi dear. Have you finished your supper?
D: Yes and how about you?
M: Yes and I’m on the computer now.
D: Oh yes, Well then, I won’t keep you.

The daughter said Oh yes? (She was surprised that her mom was working on the computer at that time because her favourite show’s on TV, for example, and she’s missing it.)

Swan (2005, p. xviii) defines a ‘discourse marker’ as ‘a word or expression which shows the connection between what is being said and the wider context’. He provides three examples of DMs: on the other hand, frankly, and as a matter of fact.2

DMs typically occur at the beginning of utterances, a characteristic which Schiffrin (1987) has used as a condition for classifying items as DMs. (Schiffrin,1986) provides representative examples commonly used in the English language such as now, you know, so, well, like, basically, I mean, because, actually, okay, and, or and oh. It stands to reason that a lot of DMs can occur at the end if they can occur at the beginning of an utterance. Here are some examples:

(7)

a. By the way, I just heard what you said about me and that’s not true.
b. I just heard what you said about me, by the way, and that’s not true.

c. So, we are back at square one.

The last example, “So, here we are again back at square one.” is kind of ambiguous in the sense it could be used to both launch and conclude a topic.

An argument or point of view has been introduced and some premise failed or wasn’t right or didn’t work out, so now they have to start again. Further points or further discussion could ensue and be brought up. When so is used with "let's try this again", it would seem to be the start of a new angle, a new try or perspective. It means let's give it another go, maybe try a different approach or maybe try something differently (if you're talking about track and field… run faster, jump higher. Try a different angle or perhaps different running shoes). But if so is coupled with "here we are back at square one", it indicates for example the hypothesis or reasoning was flawed. Something has not turned out and further research or attempts at doing something need to be done.

2 Also known as response signals which indicate that a piece of information has been registered by the recipient (Gardner, 2001 cited in Moore, 2007, p 22). They provide information about the direction the conversation is taking.

As a matter of fact is usually meant in a contrastive sense. It usually means to set someone straight on something. For example, Cindy says to her friend:

Cindy: I hate Spanish. What’s the sense of learning Spanish?
Friend: Well, your parents are Spanish, so it only makes sense that they’d want you to learn their native language. And, as a matter of fact, Spanish might become the next lingua franca given the number of its native speakers.

1 The last example, "So, here we are again back at square one." is kind of ambiguous in the sense it could be used to both launch and conclude a topic.

© 2015 ACADEMY PUBLICATION
c. I just heard what you said about me and that’s not true, by the way.

(8)

a. Unfortunately, I have no more tickets left for that date.
b. I have no more tickets left for that date, unfortunately.

(9)

a. However, I still have some tickets available for the concert on Sunday.
b. I still have some tickets available, however, for the concert on Sunday.
c. I still have some tickets available for the concert on Sunday, however.

III. CONTEXT, MEANING AND FUNCTION OF ?adi

Now, ?adi’s distribution, its varied context-dependent meanings and functions will be exemplified and examined. Examples of DMs in conversational English of equivalence and correlation with ?adi will also be provided. ?adi may serve to perform the following functions:

1. Offer of Material Support and Sympathy

Examples of both of these functions or sub-functions follow:

(1)

My house is too small for my family. If I had more money, I’d sell it and buy a bigger one.

B: ?adi ?ani ?aa!dak
Don’t worry, I’ll help you.

Speaker B is empathizing with speaker A at the same time he is offering financial support. It would be like saying “Gee, that’s too bad. Don’t worry… I’ll help you (meaning he will actually give or lend the person money).” This is the intended actual meaning of a typical or usual response in natural casual spoken Iraqi Arabic conversation and used in this way in the context. Then, in English it would be like saying: "Gee, that’s too bad. Don’t worry. I’ll lend you some money. Gee, that’s too bad. I can help you out with that. Don’t worry.”

Speaker B’s answer can, however, be an example of an habitual response towards someone who is expressing regret, or who is feeling bad, anxious or depressed about something with the intent of conveying sympathy only. Contextual and/or conversational clues (tone of voice, intonation, emphasis) would reveal the intended message of the speaker. Or, perhaps such clues would reveal the attitude and character of the speaker (what the speaker is feeling or thinking).

2. Consolation, Mitigation and Encouragement

Speaker B’s response could have been like the following:

(2a)

?adi inshallah balmu$takhbal tidg?r?r an? am? beti sigeer
No problem, hopefully you’ll be able to do that in the future. Mine is too small too.

In this case, ?adi serves as an offer of moral support, sympathy and empathy. Its message can be expanded as “Don’t worry. Things will work out in the long run. Everything will turn out fine. Everyone’s okay and it’s not forever. Everybody’s healthy and happy and that’s all that counts. You’ll get a bigger house one day”. The following are more examples of what you might hear in typical spoken English which correspond to ?adi in the present context: “If that’s your only problem, consider yourself lucky.” Or, “You call that a problem? If I could be so lucky! which obviously is not too sympathetic. So, a speaker’s response can be relative, or should I say a speaker’s perspective is often reflected

\* This use of ?adi could be interpreted as a type of “divergence” (Holmes, 2013, p 246) or “negative politeness” (Ibid, 285) so that the two participants in the conversation are not at the same level. It is like saying “wow my house is great and I have no problems at all but too bad for you.” So, it can have the opposite effect instead of trying to make someone feel better and lessen their feelings of sadness, instead of trying to unburden them of their emotional and mental dilemma.

It is helping to make the person with the feelings of regret or the yearnings for something better feel better about their situation. So, yes ?adi does serve to offer them support. But more emotional or mental than material; not like “I’ll give you enough money to buy a nice big house tomorrow.” Who’s got that kind of dough? Who’s willing/able to do that? No one I know. Rarely would an acquaintance actually give someone money who’s expressing such a wish. It’s one thing if it were a kid asking for a rubber ball or a son wanting a bike and his dad to help him out but someone expressing enough money to buy a bigger house! Of course, it’s possible. But, is it probable? One would doubt the validity of the claim to help. Who gives that kind of money away to an acquaintance? Nobody I’ve ever know, that’s for sure. For such an offer to be believable, the speaker should have made it more clear by adding another sentence such as “Don’t worry, I’ll help you. I can lend you some money. You would have to pay me back, but I won’t charge you any interest. Or, “Don’t worry. I’ll lend you some money. You’ll have to pay me back, but I won’t charge you any interest.”

\* In this context “no problem” might not be the best translation of the DM ?adi because you would never say “no problem” when someone told you about a problem of this nature where someone is distressed about their living situation. That would be making light of someone’s problem or feelings or issue. Something dismissive like that would only be more hurtful because when you are feeling hurt or sad, you want what you say to be heard, listened to, acknowledged and validated. A more proper choice in this instance would be “Oh, I get you”, or “oh, boy, don’t I know” or “oh yeah, I hear you” or even “Ah, I’m sorry” or “Oh, I’m sorry” or “I’m sorry to hear that”. So you are basically saying I’ve listened and I understand you’re upset and I empathize or sympathize with you. And then follow it with at least one or more sentences in an attempt to make the person feel better and/or give them hope for a brighter outcome in the future.

“No problem” might be said in instances where the “problem” isn’t that great and can be easily and quickly solved as in: “Gee, I don’t know how I’m going to get there tomorrow. My car broke down and it’s not going to be fixed until Wednesday”. Then, a friend might reply “Oh, no problem, I’ll pick you up tomorrow.”
in their responses which in turn are based on their life experiences. This person might consider the other one to be lucky in comparison to him.

So, *adi* is meant to cheer up the person and lessen their bad, anxious and regretful feelings by offering them moral support and empathy. Putting that all together, *adi*, used in this context, is an habitual, typical automatic response meant to offer moral support and empathy towards someone who has expressed feelings of regret, anxious, or even depressed about something.

Here is another example of *adi* serving to console, mitigate and encourage. A student (Speaker B), who has failed his Math course, feels terrible:

(2b)
A: ?ashufak mahmoum ya?akhi shinu alqusa
You look sad, my friend; what happened?
B: wallahi risabit bmadit arriyathiat
Well, I failed my Math.
A: ?adi ya?akhi ?eeda assana almuqbila
Don't worry, my friend, you can take it over.

*adi* here echoes the frequently in use English phrase "it’s not the end of the world". It also parallels "Oh, that’s a bummer", or, "Bummer! That's too bad, but you know you can rewrite it again next year. So, don’t feel too bad. A lot worse things could happen. Don’t worry. Just study hard and ace it next year. You know what? For now, just forget about it. It’s not the do all and end all. An English speaker often might say "Yeah, I hear you. I feel the same way. Or Yeah, I hear you." Or "I know exactly what you mean and what you're going through". And "Don’t worry. It’s not the end of the world. You can take it again next year." The following are more parallel examples of what you might hear in typical spoken English discourse where the psychological burden is totally wiped out: "To hell with it! Let’s go out and celebrate!"

*adi* used in this way helps to cheer a person up and lessen/ease the feelings that are bringing them down. So Speaker B cheers up Speaker A by minimizing or deflecting from his bad feelings while, simultaneously, offering sympathy and a brighter prospect in the future.

Speaker A's reply is prefixed by *adi* which basically means "Don’t worry, I'm sorry to hear the bad news". It can also be translated as "Yeah, I know what you mean. Or, that’s too bad. I wish I could do something to help you. Or I’m sorry to hear that. I wish I could do something to help you.”

Perhaps, the core meaning of *adi* would best be reflected and exemplified by the expression "Don't sweat it" as in (2c) In English, this expression is more oriented towards the young generation and that is also more colloquial. Let us say one male teenager is talking to his friend about his chances of getting on the football team he tried out for.

(2c)
Speaker 1: Gee, I wonder if I’m going to make it on to the football team.
Speaker 2: What! You sure are.
Speaker 1: You think so?
Speaker 2: Don’t sweat it (You’ve got this one.) Oh, for sure you’ve got this one. I’ve never seen anyone play like you. You are one of the best, so don’t sweat it.

So, to recap, this function of the DM *adi* consists of three sub-functions:

- Consolation as in "Wow. That’s too bad. Don’t worry. Oh, I’m sorry about that."
- Encouragement as in "It’s not the end of the world you know. It could be a lot worse. You can improve the situation by doing X, Y and Z. So, things will get better. You’ll do better next time. You can rewrite the exam next semester or year." *adi* gives encouragement and hope for a brighter outcome, hope for future success and for brighter prospects.

- Mitigation. What’s this? Lessening the load or wiping it out altogether. In English it would be like saying: "Forget about it. You can rewrite the test next year. The extra course will just make you better in math than if you had just scraped by this year." Of course, some do try to minimalize like "Math, schmath. Don’t you hate it? Oh well, better luck next year. I’ll be writing the exam tomorrow, so don’t be surprised if I join you.”

3. Acceptance of a Proposal

An example of *adi* in this role is the following:

(3a)
A: Shinu ra’yak nzour bet Abu Ali
What do you think about going to Abu Ali's house?
B: *adi*
Yeah, why not?

© 2015 ACADEMY PUBLICATION
In English "why not" might be coupled with the sentence "Yeah, let’s (yeah, let’s go). The closest translation or equivalents are statements like: "fine with me, I have no problem with that. Sure, I’m game. Sure, why not? What else is there to do?", and "We’re not doing anything else, so yes let’s (go). " Here ۣادی is a typical, standard, normal, habitual response.

There are always different levels of expressions or different textures of meaning conveyed by the DM ۣادی. Let us say two male friends are talking about visiting a third male friend they see fairly often: What do you think about going to visit Abu Ali? You might get a response like one of the following:

(3b)
Sure, I’d like that.
Yeah, okay.
Okay, when were you thinking of going?
But let us say there is one girl who is the sister of the boy her friend has a crush on and she asks her smitten friend: What do you think about visiting my brother, Abu Ali? Then you might get a response like: REALLY!!! You’re not kidding? Yes.. let’s go…. NOW, I can’t wait! Oh my god. I’m so excited. I can’t believe I’m doing this!
Or maybe one sister says to her other sister: Hey, do you want to go visit Abu Ali? (an old neighbour they haven’t seen in years.) The sister replies: Yeah, that would be great to see him again. Let’s do it. When do you want to go?

4. Disapproval, Reprimand and Indignation
An example of ۣادی serving this role of voicing indignation, criticizing and reprimanding follows. Speaker A is scolding speaker B:

(4)
A: ۣادی takhith sayyarti bidun ṣilmni wbidun ithni ṣادی tsiwwi biha hadith ṣادی tutrukha bashari ṣادی ma tikhbirni
How dare you take my car without my knowledge, without my permission (without asking me!) and without having a driver’s license! How dare you cause an accident! And how dare you abandon it on the road without telling me anything!
B: ee ṣادی dialla rouh
So there! There you go!

The English equivalent expression "how dare you!" is more an exclamation not a question. In English "how dare you!" is used when a person is angry and, though it is written like a question, it is said in a declaration of anger and thus the exclamation at the end instead of a question mark. The spirit behind the meaning of ۣادی is closely echoed in English in the following statements: "How could you do such a thing! What the hell were you thinking! Are you crazy or what! I’m so mad at you. How could you! What (the hell) were you thinking! Have you lost your mind!"

Speaker B, that is the person being reprimanded, replies in a defiant tone ee ۣادی "so there!". The meaning of this Arabic DM in this context can be explained by discussing an equivalent form in English. There is this English expression "So there!". It is the soul of ee ۣادی’s meaning. It is used usually in a situation where, for example, there are two people arguing about something and the person who has the last word often makes verbal victory statement followed by "So there!", usually said decisively and angrily. It is probably used mostly by immature people like disputing siblings or kids in a schoolyard or when they are playing together.

So let us say classmates on the school ground are arguing.

(4b)
Kid nbr 1 says: My dad will beat your dad up.
Kid nbr 2 replies: No, my dad will beat yours up.
Kid nbr 1 counters: No, my dad will. He’s bigger than your dad.
Kid nbr 2 replies: Well, my dad has a black belt in karate. So there!
The final "So there!" is said angrily and decisively as if to say “See, I showed you, didn’t I?” who’s who/who’s boss/who has the final word. That final statement, "so there!" usually "settles" the argument with the real verbal blow occurring in the preceding sentence/s. (i.e., Well, my did is unusually strong. And he has a black belt in karate. So there!)

Maturity level of the participants in this conversation has something to do with how the argument played out and the types of things said and the diction used. For example, two professional business men would not be arguing tit for tat like this and say something like “So there” when trying to prove a point. That would definitely be out of place and would be too juvenile and unprofessional.

5. Politeness and Courtesy
Following is an example:

(5)
A: ?ashkurak ṣala hal musaa?ada wallahi ma ṣا?ruf kef arudlak hatha aljameel
Thank you for your help; I really don’t know how to return this favour.
B: ṣادی (yam?awwad ṣادی) ihna ṣا?khwa.
No worry, we are like brothers.٧

٧ In English, you might hear “You’re like a brother/sister to me”. Or, "you’re like family." Or, "I’m closer to you than I am to my own family."
To bring out the meaning of ُادُي in this context, a more natural way of expressing this conversation is required. Corresponding examples of utterances which might be heard in typical spoken English are: "Thank you for helping me. I don’t know how I’ll ever repay you." Or, "Thanks so much for your help. How will I ever repay you?" Or, "Thank you for your help. Boy do I owe you! How can I make it up to you?"

The polite and courteous reply is strengthened further by combining ُادُي with another DM *بَلَّا* and followed again by ُادُي. This combination acts together to express a higher level of politeness. English examples which most closely align to the Arabic meaning are: "You don’t owe me a thing. After all, what are friends for? Oh, forget it. You’re such a good friend. That’s the least I can do. Oh stop! Will you? I take care of family and you’re... you’re like family to me (not typical... only in a certain context.) Or, "You’re like a brother/sister to me." You’ve helped me too you know. So forget about it. One good deed deserves another. Oh, that was nothing at all. Don’t even think about it. You’ve done enough for me already. You don’t owe me anything, so forget about it! That was nothing... nothing at all. You don’t have to do anything. I was glad to help you. So, don’t worry."

In English it is not meant as an extra level of politeness more so as putting the person at ease in terms of relieving their feelings of indebtedness. However, the Arabic version and this English example both display going an extra step to make the person feel better and perhaps also serves to save face.

### 6. Mild Criticism and Sarcasm

The following is an example:

(6) ُادُي تي cos h *لالمتيحان* بيدون قلم و راقة و ُادُي تي موتِاكِهِر
It is okay to come to the exam without pen and paper and it is okay to come in late.

The criticism and sarcasm can be expressed in the following rhetorical manner which conveys the spirit behind the meaning of ُادُي: Is it okay to come to an exam without a pen and paper? And maybe you should be late too while you’re at it. Or, "Yeah, it’s OK to come to an exam without a pen and paper! And why not be late too while you’re at it?" Or, "Yeah, it’s OK to come to an exam without a pen and paper and why not be late too? Yeah, show up late why don’t you?" The DM ُادُي in this context can also be rendered as "sure" as in: "Sure it’s okay to come to an exam without a pen and paper and be late too while you’re at it. Sure, why don’t you! Or "Sure it’s OK to come to an exam without a ... And why don’t you come in late too?" said in a sarcastic tone of voice.

Again there are different levels and textures of meaning depending on the speakers involved, or the context, and as we mentioned before, sometimes the intended meaning. Is a particular linguistic unit in the utterance stressed? Is the meaning elevated? Is the talker calm? Angry? Happy? Disappointed? Frantic? Panicking? What is their role? teacher/student, boss/employee? What is their relationship? Parent/child, older sibling/baby of the family What is the level of formality? Senior staff/junior staff, trainer/trainee Is formality required or a part of the situation? As Brown & Yule (1986) point out, such background information, setting and relationships among speakers and hearers are obviously relevant for understanding the communicative event. There are often different layers of meaning and this is certainly the case when someone is being sarcastic.

### 7. Requesting and Granting Permission

A student asks her Teacher: Is it okay to leave class early?

(7) ُادُي تي ناس WS *الْيَوْمَاكَم* مذ بو لالحي ا리를 باد ُادُي تي موتِاكِهِر
Is okay for me to leave class early?

B: ُادُي
It is okay.

Of course the teacher would say something like "Yes, that’s fine. All right. Yes, that’ll be fine"; Yes, you may, Yes, you have my permission (i.e., a bit more formal and old school i.e., a student asking their teacher). Or, "Yes, you may do that". Or, if a less formal teacher/class: "Yes, that’s OK." But, you’d never expect a teacher to sound over zealous or too lax and lenient like "Of course John, you needn’t bother to ask"; then so many kids would be cutting class it wouldn’t be funny. Imagine if a teacher actually said: "Of course, there’s no need to ask." Then for sure… kids would start taking advantage of the situation.

### 8. Indifference and Obliviousness

The following dialogue between two speakers exemplifies this use of use of ُادُي:

(8) ُادُي تي واس WS *الْتَّزَاوَرُ سْتَة WS اْيُعْلَيْنَاء* WAD ُادُي تي موتِاكِهِر
The neighbors are very loud

B: ُادُي داْيامان هام هاكاثا
We got used to it; they are always like that.

---

8 Or is the speaker eager or anxious? So, let’s say a mother has been waiting to hear from her daughter who’s in the hospital giving birth. After giving birth, the daughter phones her mom. Mom, it’s over and I survived" and the mom might reply: Oh…. Congratulations. I’m so glad. “So, is it a boy or a girl?”
The spirit behind the meaning of ًَادي in this context in Arabic might be best understood by the following group of utterances in conversational English: "Oh…we’re used to it. They’re always like that. Or,”Oh, we’re used to that raucous. They’re always carrying on like that. Oh, we’re used to that by now. We’ve tried to get them to pipe down, but they’re so inconsiderate. They’ll never change.”

Following are three English examples where the DMs ًَادي, َّأي, and َّأوه serve functions similar to ًَادي:

(8a) Example of َّأي:
A: Is that neighbour blasting his music again?
B: Yeah, nothing new. And the funny thing is… I hardly notice it now becz I’m so used to it.
A: maybe you’re getting deaf! (Then, they both laugh)

(8b) Example of َّأي and َّأو:  
A: Wow, that baby sure cries an awful lot.
B: Yeah, well, you get used to it…. Hardly bothers me now.

(8c) Example of َّأوه:
A: Your neighbour’s dog barks non-stop.
B: Oh, we don’t even hear it anymore really; we’re so used to it.

9. A Hedging Device of Softening Criticism and Face-saving

Face saving is trying to put the person at ease, rid them of anxiety and make them feel better. The DM ًَادي acts in this manner as in the following conversational exchange:

(9a)  
A: َّأه شلون َّأي إملاء و َّأه شلون َّأياني َّأه الدام  
You’re late and now I’m going to be late for work.
B: َّأه لاجي لما ليغت الإلفة  
I’m very sorry, I couldn’t find my keys.
A: َّأه باس للتسوهة كلي يوم  
Okay, but don’t do it every day.

The essence of the meaning is: “It’s OK this time, but don’t do it again.” Or, "It’s okay, but make sure you have your keys and everything ready the night before.” Or, "It’s okay, but don’t do it everyday. So, next time, be prepared!” And "That’s all right; just don’t do it again.”

This function and meaning of ًَادي can be illustrated using the English DMs "Oh", "well" and the common expression "no worries". Daughter (D) says to her mother (M):

(9b)
D: Mom, I accidentally ran over your flowers with the lawnmower.
M: Oh, don’t worry. They’ll grow back.
D: What if they don’t?
M: Well, I can always plant more.

10. Resignation and Submission or Surrender to Something Beyond One’s Control

ًَادي may also signal a sense of resignation:

(10)
A: َّأه ماشان َّأهشين بحل الال تحروف الالعشي وا َّأهشو بانة – تفجرات و مساعدات – َّأهش اياكس اوش وا َّأهبا  
How can you live under such terrible conditions?.... the explosions, all these problems, the army, and the raids?
B: َّأه َّأهأوادنا َّأهشال  
What can I do! What other options are there?  

In this instance, ًَادي expresses a sense of helplessness, and the sentiments expressed here are echoed in English by "What can we do? It’s not like we have a choice.” It expresses this sense of surrender that there’s nothing they can do to change the situation…. there are no alternatives… they are forced to live like that and just deal with it the best they can. ًَادي signals this sense of resignation.

11. Divergence in Opinion and counter proposal

The following dialogue between two speakers (A and B) demonstrates the use of ًَادي: as divergence in opinion:

(11)
A: َّأه ماشان َّأهشين بحل الال تحروف الالعشي وا َّأهشو بانة – َّأهش اياكس اوش وا َّأهبا  
How about going to Baghdad this weekend?
B: َّأه َّأهلو لاده ما نَّأهلي اليوم َّأهشل  
No (or No way.), the weather’s too hot. Why don’t we go some other time when it’s not so hot? (Or Why don’t we put it off for another day?)

َّأه َّأهش اياكس اوش وا َّأهبا

9  The literal meaning is “We’re accustomed to this.” But, the heart of the meaning is “What can I do! What other options are there!” because there’s no getting accustomed to that kind of situation.
Oh come on. What’s the problem? The car’s got air-conditioning.

12. Assurance and Facilitation
The following dialogue between two speakers (A and B) demonstrates the use of ُعُدَيَة to signal assurance and facilitation:

(12)
A: ُعُدَيَة ؛أُسْعِعَرَةُ وَلَازِمَةُ ُكُلُّ أُرْسَال فِيْشَالَ وَماً وِيْسِلَن
All the photos you sent through Skype didn’t come through. I didn’t get any of them.
B: ُعُدَيَة ؛أُرْسِيلْتُ الْجَيْلَةُ ؟ُخْلَة
Don’t worry. I’ll send them again.

13. Confirmation Seeker
The following is an example:

(13a)
A: ُعُدَيَة ؛مِهْتَجَةً رُوْحَةَ لَكَارْكُوُكْ لِشِيرَا؟ ٌقَانَاٰفُةَ بَسُ ؟ِيْنَدَيْبَ ؟ْرُوُعَ
I need to make a trip to Kerkouk to buy a sofa set but I can’t because I’m working.
B: ُعُدَيَة ؛يَآَسَحْتَرْقُيْهِنَّ ؟ُلَكَّ
Oh, well I can do that for you. 10.
A: ُعُدَيَة ؛أُصَاحِبَةُ مَا يُسَبِّبُهُكُ مُثْحَأْتَا
Really! Or, Oh, really? You’d do that? (Or You would do that for me?) I hate to impose on you.
B: ُعُدَيَة ؛يَآَسَحْتَرْقُيْهِنَّ ؟ُلَكَّ
Oh, it’s nothing… nothing at all. Oh, it’s no problem whatsoever. Or, yeah not at all.

Note that speaker B used ُعُدَيَة which is a cluster of three DMs. Its core meaning would best be echoed by the English phrases “yeah, no problem whatsoever. Yup, It’s no trouble whatsoever. It’ll be a cinch. Don’t even think about it.”

Some interlocutors use it so frequently as a fixed and lexicalized discourse marker. It seems to cover various aspects of the interaction expressing agreement and acknowledgment. At the same time the expression indicates divergence from presuppositions and assumptions:

Neighbour/friend (A) says he’ll go pick up the sofa set for his friend (B):
B: You’d do that for me? Are you sure that wouldn’t be a problem?
A: Yes, I’m sure. Or, Yes, no, that wouldn’t be a problem. (Yes, I’m sure. No, that wouldn’t be a problem.) Yes, no… no that wouldn’t be a problem.

"No" is a restatement as if to stress that it really isn’t a problem…that it’s no bother at all. This is a reassurance and a confirmation to put the person at ease… to assure them it’s OK.

The casual and spontaneous usage of the complex DM of Arabic ُعُدَيَة can also be exemplified by the English complex DM "Yeah, no, okay". Typical examples of this expression are:

(13b)
A: Are you sure you don’t want to play baseball on Saturday? Are you sure you want to miss the tournament?
B: Yeah, no… maybe not.
A: Do you want some ice cream? (spoken to someone who’s on a diet and is really desperate to lose weight)?
B: Yes, no, okay…. Maybe just a little.

People are answering without a lot of thought…. They are spontaneous answers in informal situations. And it could be the other way around:

(13c)
A: Are you sure you want to miss the tournament?
B: No, yeah… maybe not.
Or no, yeah, no well, maybe not.
Or:
A: Do you want some ice cream?
B: No, yes, no…, maybe a little wouldn’t hurt.

It should also be noted here that ُعُدَيَة is not unique to the variety of Arabic spoken in Iraq. Kanakri and Al-Harahsheh (2013) identified nine functions of this DM in spoken Jordanian Arabic such as consolation, permission, rebuke, contempt and courtesy. In Jordanian Arabic as well, ُعُدَيَة "serves various functions in different contexts and situations" (Ibid p. 62).

The aim of the preceding discussion has been to investigate the linguistic element ُعُدَيَة to determine if it falls within the parameters of being a discourse marker. To this end, its distribution, its varied context-dependent meanings (no worries, ok, how dare you!, etc.) and functions have been examined. Some instances in which ُعُدَيَة correlates with English DMs or expressions have been given, together with a discussion of shared properties, functions, meaning and distribution.

10 Or, "Oh, don’t worry. I’ll pick it up for you."
IV. CONCLUSION

Based on interactional exchanges from 10 different speakers in different situations which represent real language usage, both the distribution and function of the token ُءادي were investigated.

ُءادي conforms to many of the generalizations about discourse markers. It occurs only in oral discourse; it is a short element of language; it appears in utterance-initial position; it is optional as its omission does not alter the grammaticality or the referential meaning of the utterance although it might make the utterance less acceptable pragmatically, and it is of an ambiguous lexical specification which makes it difficult to classify into a particular syntactic category.

It has also been shown that ُءادي performs the discourse and pragmatic roles and functions of text cohesion and attitude signaling. Examples of this Arabic DM, its complex clustered version ُءاديلا and the corresponding English equivalents oh, yeah, well were investigated. They reveal how the DMs indicate the attitude, belief and opinion of the speaker at different layers and angles of discourse. They also reveal the direction in which the conversation is heading. The investigation shows that the functions are varied, as is characteristic of discourse markers. It is such structural descriptions, roles, and functions which support its classification as a DM.

A more thorough investigation is required in terms of equivalence and correspondence between ُءادي and English DMs to explore their characteristics, distribution, meanings, functions and roles. Such an investigation will undoubtedly have significant implications and consequence for language education and translation. Clearly DMs present a problem. They are interesting to study and analyze but very challenging to teach because of their abstract nature and variedness in terms meaning which is impacted and determined by context.
